TO WHOM IT MAY CONCERN:

Electro-America, Inc., has been helping to support the technological needs of our firm since 2006. Although we have an on-site Network Administrator, we rely on Electro-America to consult with us and assist with the larger projects.

We recently made the decision to upgrade our network to a two-node cluster system designed by the Engineering team at Electro-America. This was an exceptionally complex upgrade that we had been considering for quite some time and when we made the decision to move forward, Electro-America was by our side, guiding us through the entire process. We were able to migrate seventeen local servers to a highly available system. Condensing our network will allow us to save a significant amount of money on the cost of hardware, software, licensing, and service contracts.

Electro-America, properly planned the upgrade step by step, acknowledging every detail so that our firm would experience minimal interruption or downtime and they took into account all our applications to ensure that we would not run into unexpected compatibility issues.

We were very pleased with the entire process from start to finish and highly recommend Electro-America, particularly for network design services, migrations, upgrades, consulting, and project management.

Very truly yours,

Sara M. Diaz
Director of Administration
